

Sounder beacon

What is the sounder beacon?

The Sounder Beacon combines visual indication together with a loud siren in order to alert people with hearing or visual impairments to a certain type of alarm activation (eg smoke detector) or to an incoming telephone call. The Sounder Beacon can be connected to the Lifeline Vi, Lifeline Vi+ or other Tunstall telecare enabled systems.

Two colours are available in order to differentiate between alarm types.

How does it work?

When activated, the Sounder Beacon will flash and generate a sound to alert the user of the present situation.

Why is it needed?

Visual and audible alarms can provide important feedback for users with hearing or visual impairments. These can indicate circumstances such as a caller at the communal door when used in connection with a scheme, or the activation of telecare sensors e.g. Smoke Detectors.

Who is it for?

The Sounder Beacon is for anyone who requires additional notification of alerts generated by telecare sensors.

Features and benefits

- Local visual and audible reassurance - allow those with visual and hearing impairments to have enhanced user feedback
- Choice of two colours - to allow users to differentiate between types of call
- Sounder can be disabled - for specific installations tailored to individual needs

Technical details

Weight:	180g
Dimensions:	200 x 90 x 230 (WxHxD)
Power supply:	12v DC to 48v DC

Standards

CE:	Compliant
Manufacturing & design:	SO9001: 2000
Part Number:	92100/18 red 92100/20 blue 8020/48 power supply unit
